

Revisions to Exit Statuses in GPMS

The GPMS uses Case Statuses to help organize, filter and sort participant cases. In GPMS Release 26.2, the statuses for exited participants have been revised, to better align them with the SCSEP performance measures, and provide users with better tools for organizing and reporting on cases in GPMS.

Prior to release 26.2, GPMS had two statuses for exited cases: **Exited – Closed** and **Exited – In Follow-Up**. Below is an excerpt from the *SCSEP GPMS User Guide*, defining those statuses.

Status	Description
Exited – Closed	A case has been exited for a reason other than unsubsidized employment.
Exited – In Follow-Up	A case has been exited for unsubsidized employment and has a placement associated with it. <i>Follow-Up</i> is only relevant for enrollments that have a placement.

These Exit Statuses have now been revised, and additional statuses have been added, to better align with the SCSEP’s employment outcome measures and provide grantees and users with better tools for case management and follow-up after exit.

The new statuses are intended to align with the data elements on the QPR and the Employment Rate Q2 and Q4 Employment Outcome Measures.

New Exit Statuses after Release 26.2

Status	Description
Exited – Excluded	A case has been exited, and the Category of Exit is “Other Reason for Exit”, with the Reason for Exit set to “Exclusion”. These cases are counted in C.2c. Exclusions on the QPR and are not included in the SCSEP Employment Outcome Measures.
Exited – In Follow-Up	A case has been exited for any reason other than “Exclusions at Exit.” In-Follow-Up status is relevant for all cases, with or without a Placement. These cases are included in the denominator of B2.1 Employment Rate Q2 and B2.2 Employment Rate Q4 on the QPR. Cases will remain in this status until they reach Expired status.

Status	Description
Exited – Expired	A case has been exited for any reason other than “Exclusions at Exit”, and enough time has passed that the case is no longer counted in the Outcome Measure B2.2 Employment Rate Q4 . Cases will be moved to Expired status at the Year End Close of the program year that includes the fourth quarter after the case exits.
Transferred	A case has been Transferred to a different Grantee. These cases are counted in C.2e. Transferred Out of Project . The Exit Date for these cases is the Transfer Date. These participants may remain Active with the recipient grantee, under a new Case ID.

The revised statuses make several important changes.

Exit status is no longer dependent on a case having a placement. This change will allow users to better identify all participants included in the denominator, or cohort for the **B2.1 Employment Rate Q2** and **B2.2 Employment Rate Q4** measures. This will enhance the monitoring of performance goals and improve post exit contact and case management by helping users determine whether a participant has a Placement after exit or may need to return for additional services.

The addition of **Exited – Excluded** status makes it easier for users to identify cases that are not included in the **B2.1 Employment Rate Q2** and **B2.2 Employment Rate Q4 measures** and are not expected to be seeking employment or need post exit contact or case management at the time of exit.

Cases will remain in **Exited – In Follow-Up** status until the close of the program year that includes the fourth quarter after the case’s exit date. At that point, the case is no longer counted in any current QPRs, and data can no longer be entered for Placements and Follow-ups for that case. The status will then change to **Exited – Expired**.

Users will be able to use the filters on the case landing page to better identify all cases in an exit cohort. For example, selecting **Exited – In Follow-Up** and an Exit Date range of January 1, 2026, through March 31, 2026 (PY25 Q3), will identify all cases in the denominator for the **B2.1 Employment Rate Q2** for Q1 of PY26.

Along with the revised exit status, and the addition of case notes functionality in Release 25.8, more enhancements are expected in upcoming releases to allow users to better monitor and report on post exit case management and contacts and improve the alignment between GPMS and SCSEP performance measures and workflow.
