Green Core Area Definitions

The Georgia Department of Labor's Workforce Statistics & Economic Research Division has identified five core areas of green business activities and green jobs. Green activities and jobs fall under one or more of the following five core areas:

- **Renewable Energy** – activities related to developing and using renewable energy sources such as solar, wind, geothermal, and biomass, as well as traditional, non-renewable sources of energy undergoing significant green technological changes (e.g., oil, coal, gas, and nuclear)

- **Energy Efficiency** – activities related to increasing energy efficiency (broadly defined), making energy demand response more effective, constructing "smart grids", and other energy efficient activities

- **Pollution Reduction & Removal, Greenhouse Gas Reduction, & Recycling & Reuse** – activities related to reducing or eliminating the creation or release of pollutants or hazardous waste from the environment, reducing greenhouse gas emissions through methods other than renewable energy generation and energy efficiency, such as electricity generated from nuclear sources, or reusing, remanufacturing, composting, or avoiding creation of waste materials or wastewater

- **Natural Resources Conservation** – activities related to reducing the environmental impact of agricultural production and improving natural resources conservation, including the use of chemical fertilizers and pesticides, soil and water conservation, sustainable forestry, land management, and wildlife preservation

- **Environmental Compliance, Education & Training, & Public Awareness** – activities related to enforcing environmental regulations, providing education & training related to green technologies & practices, & increasing public awareness of environmental issues

Georgia's GREEN JOBS 12

Service Delivery Region

Coastal Georgia

Includes the following counties in the vicinity of the cities of Savannah and Brunswick: Bryan, Bulloch, Camden, Chatham, Effingham, Glynn, Liberty, Long, and McIntosh

Georgia Department of Labor
Workforce Statistics & Economic Research Division
Mark Butler, Commissioner

The Georgia Department of Labor recently conducted a Green Jobs Survey to assess current levels of "green" employment in the state. This pamphlet presents our findings for Service Delivery Region (SDR) #12 – Coastal Georgia.

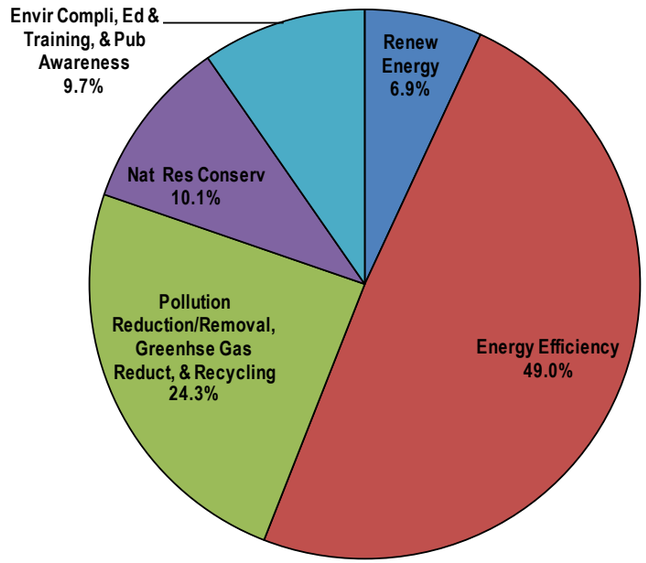

Broadly defined, a green job is one that produces goods or provides services that benefit the environment. The work can be found in at least one of the five core green economic clusters listed on the back of this pamphlet.

Nearly one percent of all jobs in this region are green, roughly the same percentage as in the state as a whole. Of the approximately 40,000 total green jobs in Georgia, 1,680, or over three percent, are located in this region. These jobs can be found in all five green economic clusters, in nine major industry sectors, and in 35 different occupations. They range from jobs that do not require any education beyond high school to positions that require advanced degrees and extensive job experience.

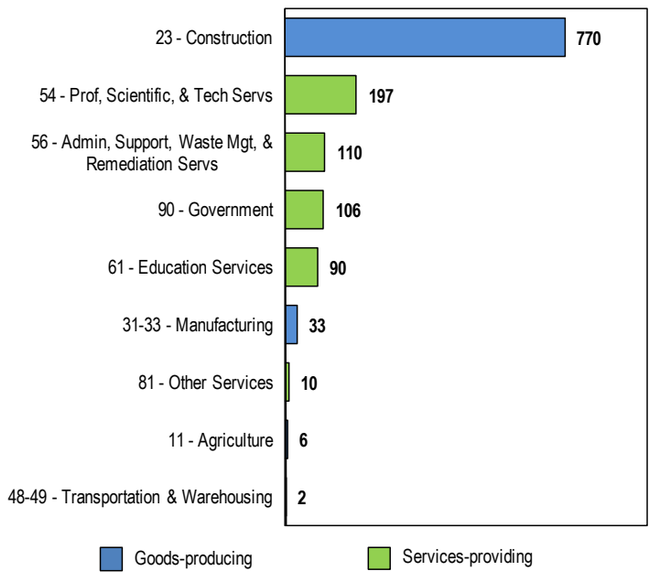

Survey Highlights

- Over half of the 35 green jobs had an average wage higher than Georgia's mean wage ($19.87) for all occupations, while 11 had an average wage ($22.64) higher than all green jobs combined.
- The average wage ($21.60) for all green jobs was 20 percent higher than the mean wage ($19.93) for all occupations in this region.
- Nine industry sectors in this region had green jobs, 61 percent of which are goods-producing.
- Out of 35 green jobs in this region, eleven typically require a bachelor's degree or more.

Employment by Green Core Area

Green Jobs by Industry Sector

Top Ten Green Jobs

SOC Code	Occupation	Job Prep Level	Average Wage
17-1011	Architects, Except Landscape & Naval	5	$39.42
