

Executive Summary

Town Hall: Training Employment Guidance Letter 23-19, Change 1

December 12, 2022

Moderator: Christina Eckenroth

Speakers: Dana Matthews, Melika Matthews, Evan Rosenberg, Greg Scheib, Dana Westgren

Data validation is a series of internal controls or quality assurance techniques established to verify the accuracy, validity, and reliability of data. Establishing a shared data validation framework across programs ensures all program data consistently and accurately reflect the performance of each grant recipient.

Employment and Training Administration (ETA) released updated guidance to grant recipients of the U.S. Department of Labor workforce programs, including states, to use in developing procedures for ensuring the data submitted for performance reporting are valid and reliable. These technical updates will align the guidance to changes made to the information collection requests associated with these programs' performance data collection as well as clarifying edits based on commonly asked questions.

ETA staff provided a broad overview of the key revisions of [TEGL 23-19, Change 1](#), discussed what remained the same, and addressed program specific highlights.
